

# I CAN WALK AGAIN

By Cynthia Gumede  
Director of Oxygen For Life  
with permission from  
Mr Siphosikhosana

I remember with full clarity that fateful day in December 2002. I had been away on business for about a month and when I returned home, my son, Simphiwe, exclaimed, "Ma, Mr Siphosana is dying in his flat."

We were staying in the same complex, so I rushed to his flat and knocked on the door. No one answered. I eventually called his cellphone number. While I stood anxiously at his front door, I could hear his phone ringing inside the flat.

I assumed Mr Siphosana was too ill to open the door, or to even answer his ringing cellphone. Then, by God's divine intervention, the front door opened slowly. It was his son who had not been going to school because he did not want to leave his dying father alone. The boy was scared but very brave and caring.

As soon as he opened the door, I rushed inside. I was suddenly hit by a very strong smell of rotting flesh. I immediately opened the windows to get fresh air in. Mr Siphosana was still alive, but he had a terrible gaping and rotting wound on his leg.

I phoned for an ambulance, and when it arrived, one of the para-medics examined the rotting wound and said that Mr Siphosana's leg would have to be amputated.

Mr Siphosana told us that he was a diabetic and had suffered from leg ulceration for some time. The wound had deteriorated, and a doctor had told him that he had gangrene, and the leg should be amputated.

He had disagreed with the doctor, and had stayed in his flat, deteriorating in health.

better to lose a leg than lose his life.

Mr Siphosana was insistent that he would not go to hospital, and so the paramedics left reluctantly.

I then felt it appropriate to tell Mr Siphosana about the company I was working with, and the amazing way that one of our products, Cellfood, was assisting all sorts of people by balancing their systems, and getting their systems to function as God intended them to function.

I explained to him how Cellfood increased oxygenation in the bloodstream, and how this assisted the body in cleansing toxins and poisons out of our bodily systems.

Because of my enthusiasm for Cellfood, I gave him a full explanation on how the other elements in Cellfood, such as the hydrogen, minerals, amino acids and enzymes, assisted the body in repairing and regenerating cells; and how other people with diabetic ulcers and various other wounds had benefited from using Cellfood.

Mr Siphosana listened carefully and then said that he wanted to use this amazing product. Because of his very serious condition, I suggested to him to take fifty drops of Cellfood four times a day. (Normally, one only takes about 25 drops of Cellfood daily. For sickly people, they start on about four drops daily and slowly build up to even 100 drops daily.) For his open wound, I applied Cellskin Gel and Cellskin Mist on it. Cellskin products also contain Cellfood blended with superior skin care ingredients, and assist in bringing about cellular restoration at skin and tissue level.

Every day I visited Mr Siphosana and washed and fed him as if he was a baby.

His father had also had a leg amputated, and he did not want to suffer as his father had.

The paramedics wanted to take Mr Siphosana to hospital, but he refused to go. They told him of the serious consequences of leaving his rotting wound unattended. They showed him that because of all the toxins and poisons now in his system, even his glands were abnormally swollen; and that it would be

At first he was very weak and could not feed himself. His son, and my kids were very supportive. Some of his friends and family also assisted in nursing him back to health. We all made sure that he had his Cellfood daily, as well as lots of water to flush out the toxins from his system; as well as vegetables and fruits to help his body rebuild itself.

Within three months, Mr Siphosana could walk with the assistance of a walking stick and within another three months, he was walking with-out any assistance. It took about a year for the open wound on his damaged leg to close and heal (see the picture of his healed leg).

Today we all thank God for the miracle of sparing Mr Siphosana's life and for answering our prayers with a product such as Cellfood that has helped his body to restore itself. Mr Siphosana will continue taking Cellfood every day, because it is a lifestyle product that will daily bring about cleansing, balancing and regenerating of cells.
