

Cellfood®

Oxygen Mineral Supplement

Winner of the International Hall of Fame Advanced Technology Award.

Brian Billings

WHAT IS CELLFOOD?

Cellfood is a 21st Century highly-concentrated and super-energized liquid, which is rapidly absorbed by the body in order to start the process of cleaning, building, regenerating and balancing the body as soon as you take it.

WHY TAKE CELLFOOD?

Every day we breathe in air that is polluted, we drink water and other liquids that are contaminated with hazardous waste or contain chemicals and additives that are detrimental to us. Some of the foods that we eat are depleted of minerals; are over-refined, over cooked and have excessive fat content; and are preserved and prepared using harmful chemicals, additives and cooking processes. We also smoke, and drink alcohol excessively, and we exercise too little.

As all of this has a detrimental impact on the quality of our lives, today we need something amazing to help us deal with our modern day stressful situation. Something that will constantly clean harmful toxins and waste from our bodies, restore cellular damage, build our bodies, strengthen our immune systems and balance us at our physical, electro-magnetic, biological and chemical levels.

THE IMMUNE SYSTEM

Apart from assisting with the cleansing of cells, Cellfood raises the frequencies of all organs, making them more resistant to the lower frequencies of viruses, bacteria, and parasites. In 1991, Dr Aristo Vojdani, Vice-President of Immunosciences Laboratories Incorporated, USA reported, **"significant increases in T-cells with increasing dosages of Cellfood"**. This means that as the immune system is being progressively boosted, it makes the body more capable of dealing with micro-organisms that could be detrimental to one's health.

WHAT RECOGNITION HAS CELLFOOD RECEIVED?

Cellfood® was unanimously voted by all the Inventors Clubs of America for the 1997 Advanced Technology Award presented by the International Hall of Fame in Atlanta, USA.

Cellfood® is made in an FDA licensed laboratory by Nu Science Corp. USA, and distributed in SA by Oxygen For Life (Pty) Ltd, Tel. (011) 957-2426 It is obtainable from health practitioners, pharmacies, health shops and distributors. www.oxygenforlife.co.za

"I have always been a very strong and healthy person, in spite of possibly overdoing smoking and drinking. Without warning, I suddenly experienced terrible stomach pains. After a week a doctor put me on medication. This did not help, and I went to hospital, for tests".

"To my absolute horror, they discovered a cancerous growth and colon cancer. I was immediately operated on, having the growth removed and a colostomy. I was discharged from hospital and told I needed to start radiation treatment".

"I did not want to be exposed to radiation and, fortunately a family member told me about Cellfood. I started taking it, and did not go for radiation treatment. Soon, I was taking 75 drops of Cellfood a day".

"Three weeks later I went for further tests. The surgeon was amazed and told me there was no trace of cancer in my systems".

"I was very pleased and increased my dosage to 90 drops per day. When I went for another biopsy, the surgeon said that I had improved so much that he could reverse the "bag system" I had, and surgically reconstruct my colon, so that I could live a normal life".

"I have now had three major abdominal operations; and, because I improved so much after Cellfood, my intestinal system has been completely re-constructed. After the last operation that lasted three hours, I was amazed at how quickly I recovered from the anaesthetic. I was able to talk to family members after a few hours; whereas, after my first operation (before I started taking Cellfood), my reaction to the anaesthetic and the operation was so traumatic that it took me days to recover. All the operations have been successful; and, I have completely recovered and lead a normal life. I still take 50 drops of Cellfood every day, which helps me enormously, now that I am back doing a full day's work".

"I will continue to take Cellfood for the rest of my life".
