

# SILENT KILLER

by Sister Michèl Maree-Ginsberg  
Registered nursing sister

**A**lthough we often hear that "cancer can be cured", we also hear of so many cases of cancer re-occurring and being fatal. Cancer is still the much feared killer, lurking around, waiting to strike, again and again.

Statistics of the BIG FOUR cancer killers (lung, colon/rectal, breast, and prostate), reveal that progress has not been as fast as expected over the past 30 years. In the 1970's, 50% of people diagnosed with cancer lived for at least another 5 years. Today, 30 years later, the 5-year survival rate is only 63%. This is because once a cancer has spread, chances of survival are scarcely better now than they were 30 years ago. Doctors have dramatically reduced deaths from ailments such as heart disease, but cancer is still as lethal as ever.

It is a sad reality that this situation should not exist, not when one considers that Dr Otto Warburg stated: "The primary cause of cancer is the replacement of normal oxygen respiration of body cells by anaerobic cell respiration."

Dr Warburg received Nobel Prizes in 1939 & 1941 for his work, and yet his findings are not well known.

To further back-up the importance of an oxygenated or aerobic state in the body, Dr Arthur Guyton, author of The Textbook of Medical Physiology states:

"All chronic pain, suffering and diseases are caused from a lack of oxygen at the cell levels". This textbook, in its 15<sup>th</sup> edition, is the textbook of medical students when studying to become doctors.

Oxygen is essential because it is our main purifying agent, oxidizing toxins and waste in the body, so that the body can effectively expel them on an ongoing basis through its normal channels of elimination (e.g. respiration, perspiration, urination).

When there is a lack of oxygen, (anaerobic state), toxins accumulate in the body, the body becomes stressed, cells get damaged, and the body's

immune system becomes compromised, creating a breeding ground for harmful bacteria, viruses and pathogens, and so mutation and disease set in.

**"The primary cause of cancer is the replacement of normal oxygen respiration of body cells by anaerobic cell respiration".**

So, apart from knowing that a lack of oxygen results in major diseases, recent research is also making us more aware of the importance of nutrition in maintaining a balanced and healthy body. Unfortunately, however, balanced nutrition is more easily found in magazines than on the dining room table. Mineral depletion in our soils, pesticides, food processing, preservatives, and pollution, etc., are resulting in many essential nutrients being destroyed.

This mineral deficiency and chronic lack of oxygen in our environment (mainly due to industrial pollution) results in harmful toxins, wastes, and free radicals accumulating in our bodies at a faster rate than our bodies can normally eliminate them.

Many experts maintain that this rapid accumulation of toxins and free radicals is leading to uncontrolled cellular mutation, characteristic of cancer, which is becoming prevalent in so many people today.

**"To my absolute horror, they discovered a cancerous growth and colon cancer".**

As a nursing sister, my daily experience with Cellfood, the amazing oxygen mineral nutritional supplement, has convinced me that it is the solution to many people's problems. An example is the experience of Brian Billings:

"I had always been a very strong and healthy person, in spite of possibly overdoing smoking and drinking. Without warning, I suddenly experienced terrible stomach pains. After a week a doctor put me on medication. This did not help, and I went to hospital for tests.

"To my absolute horror, they discovered a cancerous growth and colon cancer. I was immediately operated on, having the growth removed and a colostomy. I was discharged from hospital and told I needed to start radiation treatment. I did not want to be exposed to radiation; and,

fortunately, a family member told me about Cellfood. I started taking it, and did not go for radiation treatment. Soon, I was taking 75 drops of Cellfood a day.

"Three weeks later I went for further tests. The surgeon was amazed and told me there was no trace of cancer in my systems.

"I was very pleased and increased my dosage to 90 drops a day. When I went for another biopsy, the surgeon said that I had improved so much that he could reverse my 'bag system', and surgically reconstruct my colon, so that I could live a normal life. This took three major operations, and I now lead a normal life and am back doing a full day's work.

"That was all three years ago, and I know that I am alive today because of Cellfood; and, I continue taking it everyday to prevent cancer from starting up again. I take 50 drops of Cellfood a day, and I will continue to take it for the rest of my life.

"I hope that my experience helps others who are victims of cancer; and those who want to prevent it."

**Cellfood®**  
Oxygen Mineral Supplement

**World-leading, Award-winning  
Nutritional supplement that  
assists the body in:**

- Oxygenating
- Energizing
- Cleansing and
- Regenerating cells
- Improving cardiovascular functioning
- Dealing with degenerative diseases
- Dealing with stress & fatigue
- Optimizing bodily functions
- Improving general well-being

Winner of the 1997 Advanced  
Technology Award from the  
International Hall of Fame

**Cellfood®** is made in an FDA licensed laboratory by Nu Science Corp. USA, and distributed in SA by Oxygen For Life (Pty) Ltd, Tel. (011) 957-2426 It is obtainable from health practitioners, pharmacies, health shops, and distributors. [www.oxygenforlife.co.za](http://www.oxygenforlife.co.za)
